

# Today

- Midterm discussion
- Introduction to optimization
  - Goats
  - Wine for a wedding

I thought the midterm  
was...

- (A) ...easier than I expected.
- (B) ...pretty much what I expected.
- (C) ...harder than I expected.

# The hardest part of the midterm was...

- (A) ...the multiple choice section.
- (B) ...the short answer section.
- (C) ...long-answer #1 (find  $f'(x)$  using the def.).
- (D) ...long-answer #2 (sketch  $f(x)=x^4-x^2$ ).
- (E) ...long-answer #3 (tangent line).

# The most useful thing I did to study was...

- (A) ...doing/reviewing WeBWork assignments.
- (B) ...doing/reviewing OSH.
- (C) ...doing the MT review problem set.
- (D) ...reading the course notes.
- (E) ...reviewing the lecture slides.

I expect I'll get...

(A) A

(B) B

(C) C

(D) D

(E) F

# Optimization

- Given a scenario involving a choice of some number, use calculus to find the best value.
  - Translate scenario into a mathematical problem.
  - Solve the problem.
  - Translate back (make sure it makes sense).

I have 10 meters of fence. I want the biggest enclosure possible for my goat. I only know how to make rectangular enclosures.

Find the max of

(A)  $A(w) = lw$ . ( $l$ =length,  $w$ =width)

(B)  $A(w) = w(10-w)$

(C)  $A(w) = w(5-2w)$

(D)  $A(w) = w(5-w)$

I have 10 meters of fence. I want the biggest enclosure possible for my goat. I only know how to make rectangular enclosures.

Find the max of

(A)  $A(w) = lw$ . ( $l$ =length,  $w$ =width)

(B)  $A(w) = w(10-w)$

(C)  $A(w) = w(5-2w)$

(D)  $A(w) = w(5-w)$

I have 10 meters of fence. I want the enclosure to be as small as possible but it can't be narrower than my goat (1/2 meter).

How long and how wide should I make the enclosure?

(A)  $l = 5/2$  m,  $w = 5/2$  m.

(B)  $l = 0$  m,  $w = 5$  m

(C)  $l = 1/2$  m,  $w = 9/2$  m

(D)  $l = 1/2$  m,  $w = 19/2$  m

Find absolute min of  $A(w) = w(5-w)$  on  $[1/2, 9/2]$ .

I have 10 meters of fence. I want the enclosure to be as small as possible but it can't be narrower than my goat (1/2 meter).

How long and how wide should I make the enclosure?

(A)  $l = 5/2$  m,  $w = 5/2$  m.

(B)  $l = 0$  m,  $w = 5$  m

(C)  $l = 1/2$  m,  $w = 9/2$  m

(D)  $l = 1/2$  m,  $w = 19/2$  m

# General structure of these problems

- There's an "objective function" (OF) that you want to maximize/minimize.
- The OF depends on more than one variable.
- There's a constraint relating the two variables.
- The constraint lets you simplify the OF to one variable.

$$A(l,w)=lw, \quad 2l+2w=10 \quad \rightarrow l=5-w, \quad A(w)=(5-w)w$$

# Wine for Kepler's wedding

- Wine was sold by "the length of the submerged part of the rod"
- Same length of wet rod = same volume of wine?

Which barrel would you buy?

(A)

(C)

(B)

(D)

Kepler had enough \$ for a rod-length  $L_0$ . How much wine can he get?

What do you expect to be the best option?

(A) Shortest possible barrel ( $h=0$ ).

(B) Tallest possible barrel ( $h = \max h$ ).

(C) Somewhere in between.

Objective function?  
(to be maximized)

(A)  $V = 2\pi rh$

(B)  $r^2 = L_0^2/4 - h^2/16$

(C)  $V = \pi r^2 h$

(D)  $L_0 = \text{sqrt}((2r)^2 + (h/2)^2)$

# Objective function? (to be maximized)

(A)  $V = 2\pi rh$

(B)  $r^2 = L_0^2/4 - h^2/16$

(C)  $V = \pi r^2 h$

(D)  $L_0 = \text{sqrt}((2r)^2 + (h/2)^2)$

# Constraint?

(used to simplify OF)

(A)  $L_0^2 = (2r)^2 + (h/2)^2$

(B)  $L_0^2 = (2r)^2 + h^2$

(C)  $V = 2\pi r h$

(D)  $L_0 = \tan(h/4r)$
